Re: Proposed Revised Vaccine Information Materials for Meningococcal ACWY and Serogroup B Meningococcal Vaccines [Docket No. CDC-2015-0059]

Dear Ms. Johnson-DeLeon:

On behalf of the American Nurses Association (ANA), we are pleased to comment on the matter referenced above. As the only full-service professional organization representing the interests of the nation's 3.4 million registered nurses (RNs), ANA is privileged to speak on behalf of its state and constituent member associations, organizational affiliates, and individual members. RNs serve in multiple direct care, care coordination, and administrative leadership roles, across the full spectrum of health care settings. RNs provide and coordinate patient care, educate patients and the public about various health conditions, and provide advice and emotional support to patients and their family members. ANA members also include the four advanced practice registered nurse (APRN) roles: nurse practitioners, clinical nurse specialists, certified nurse-midwives and certified registered nurse anesthetists.<sup>1</sup>

The draft vaccine information statements included in Docket No. CDC-2015-0059 have references to both "health care providers" and to "doctors." ANA recommends revising these sections of the form to include provider-neutral language throughout the statement.

The utilization of APRNs to provide primary care services is not a new practice. APRNs have delivered professional health services to patients for decades. In addition, in many states other health care providers assess the need for and administer certain immunizations. It is essential that information provided to the public, such as vaccine information statements, use provider neutral language to prevent confusion among health care consumers who receive immunizations from other health care providers and who use APRNs as their primary care provider.

---

<sup>1</sup>The Consensus Model for APRN Regulation defines four APRN roles: certified nurse practitioner, clinical nurse specialist, certified nurse-midwife and certified registered nurse anesthetist. In addition to defining the four roles, the Consensus Model describes the APRN regulatory model, identifies the titles to be used, defines specialty, describes the emergence of new roles and population foci, and presents strategies for implementation.
